### What is 1000Projects

'1000projects.com' is an educational content website dedicated to finding and realizing Final Year Projects, IEEE Projects, Engineering Projects, Science Fair Projects, Project Topics, Project Ideas, Major Projects, Mini Projects, Paper Presentations, Presentation Topics, IEEE Topics, .Net Projects, Java Projects, PHP Projects, VB Projects, SQL Projects, C & DS Projects, C++ Projects, Perl Projects, ASP Projects, Delphi Projects, HTML Projects, Cold Fusion Projects, Java Script Projects, Btech Projects, BE Projects, MCA Projects, Mtech Projects, MBA Projects, Project on Software, CBSE Projects, Testing Projects, Embedded Projects, Chemistry Projects, Electronics Projects, Electrical Projects, Science Projects, Mechanical Projects, Mba project Reports, Placement papers, Sample Resumes, Entrance Exams, Technical Faq's, Puzzles, etc

#### how it works?

Everything on this site is submitted by the students in this professional community. You Can submit your Projects, Project Topics & Ideas to [info.1000projects@gmail.com](mailto:info.1000projects@gmail.com) after you submit your project/project Idea/Abstract/Seminar Topics, These are being verified and approved by our administrator. after approval of this project/project Idea/Abstract/Seminar Topics, It can be shown on 1000projects.com so that other users can read/discuss it.The entire content on this website is Only For Educational Purpose, Non Commercial use!

Please help us/Other Users by sending projects/project Ideas/Abstracts/Seminar Topics. Thanking You!!!!

All types of open source PHP code and applications are available on Open Source Scripts.

PHP: Hypertext Preprocessor is a widely used, general-purpose scripting language that was originally designed for web development to produce dynamic web pages. For this purpose, PHP code is embedded into the HTML source document and interpreted by a web server with a PHP processor module, which generates the web page document. As a general-purpose programming language, PHP code is processed by an interpreter application in command-line mode performing desired operating system operations and producing program output on its standard output channel. It may also function as a graphical application. PHP is available as a processor for most modern web servers and as standalone interpreter on most operating systems and computing platforms.

The PHP Documentation Framework

The PHP documentation is written in XML using the DocBook DTD. If you would like to contribute to the PHP documentation project, you need to at least know the very basics of XML and DocBook.

The XML files are stored on a central server, and can be reached with a SVN client. There are many SVN clients you can use, although we recommend one command line tool or a proven WYSIWYG tool.

You will need more programs and tools to manipulate the XML files and test their content for errors. The tools you need depend on the operating system you use. Linux or some sort of Unix is recommended, although many things in phpdoc work on Windows. You will find more information about the tools you need in the tools section.

MySQL is a database.

The data in MySQL is stored in database objects called tables.

A table is a collection of related data entries and it consists of columns and rows.

Databases are useful when storing data into server. A company may have a database with the following tables: "Employees", "Products", "Customers" and "Orders".

Basic object-oriented programming functionality was added in PHP 3 and improved in PHP 4. Object handling was completely rewritten for PHP 5, expanding the feature set and enhancing performance. In previous versions of PHP, objects were handled like value types. The drawback of this method was that the whole object was copied when a variable was assigned or passed as a parameter to a method. In the new approach, objects are referenced by handle, and not by value. PHP 5 introduced private and protected member variables and methods, along with abstract classes and final classes as well as abstract methods and final methods. It also introduced a standard way of declaring constructors and destructors, similar to that of other object-oriented languages such as C++, and a standard exception handling model. Furthermore, PHP 5 added interfaces and allowed for multiple interfaces to be implemented. There are special interfaces that allow objects to interact with the runtime system. Objects implementing ArrayAccess can be used with array syntax and objects implementing Iterator or IteratorAggregate can be used with the foreach language construct. There is no virtual table feature in the engine, so static variables are bound with a name instead of a reference at compile time.

### Top Downloaded Projects

- Management of Group of Hotels ( J2EE) Project** The system aims at the maintenance and management of the different Hotels that are available in the different parts of the world. It mainly takes care of the Hotel management at the core area of the database.
- Digital Image Tracing By Sequential Multiple Watermarking .Net Project** The possibility of adding several watermarks to the same image would enable many interesting applications such as multimedia document tracing, data usage monitoring, and multiple property management.
- Visa Processing System ASP.Net Project** The project "Visa Processing System" is an automated system. It describes the process of applying for visa. There are so many visa types provided by the government like H1-visa, Dependent visa. Getting a Visa, Visa issuance is a very objective decision, and is not subjective.
- A MINI PROJECT REPORT ON PORT SCANNER** A port scanner is a piece of software designed to search a network host for open ports. This is often used by administrators to check the security of their networks and by hackers to compromise it. An online port scanner will scan your

<a href="#">imoel-cms0.1.4</a>	computer looking for open ports.
<a href="#">Kamikaze Comic Manager</a>	<b>Advertisement Management System</b> This is a website where different types of advertisements and classifieds are posted. Here the person, who wants to advertise their product, can choose different advertisement previews which are available in the advertisement template region. And client can order the advertisement by registering and conveying the requirements to the administrator.
<a href="#">Lyrics.com</a>	
<a href="#">php Mine</a>	<b>Alumni Information Database</b> This project is aimed at developing a Repository and each Engine for alumni of the college, which is of importance to a college. The Alumni Information Database is a web based application that can be accessed throughout the World. Anyone can access the search Engine to know about any Alumni of that college but can't able to add.
<a href="#">water marking in PHP</a>	
<a href="#">addressbook full fledged</a>	<b>college management system</b> This project is aimed at developing an Online Intranet College Management System (CMS) that is of importance to either an educational institution or a college. The system (CMS) is an Intranet based application that can be accessed throughout the institution or a specified department.
<a href="#">Email Sending Script</a>	
<a href="#">Free Guestbook</a>	<b>COMM4 Efficient Packet Filtering in Wireless Ad Hoc Networks - U</b> Wireless Mesh Networks (WMNs) have emerged as an important technology to deliver pervasive network access and ubiquitous mobile applications in various scenarios, such as disaster relief operations, ad hoc network support in convention centers
<a href="#">Inventory Management</a>	
<a href="#">MB Login &amp; Register</a>	<b>Corporate Address Book</b> Corporate address book mainly developed for an organization to store their employee's personal data. The System consists of various users like the Administrator, HR manager and Employees. Everyone have their own responsibilities.HR manager has the privileges to add/delete the employees. Administrator registers the employees and allocates the IDs for the employees. Employees can login and store their personal data.
<a href="#">PHP Quicksite</a>	
<a href="#">PHP-MySQL GuestBook</a>	
<a href="#">Simple Content Management System1</a>	<b>Corporate Recruitment System1</b> The Main objective of this solution is to make easy the recruitment process of any organization. This CRS is designed by keeping in mind both parties Job providers and Job seekers. CRS allows Job seekers to register their details like skills and experience with the system, and then on the other hand even it allows job providers to post their requirements with the system.
<a href="#">TX news System</a>	<b>E LEARNING CODE</b> You'll be attending the nation's largest accredited portal, with an unsurpassed reputation for educational excellence and student service. You'll also be earning one of the most current and relevant degrees offered in the areas of Business, Management, Technology Management, Information Systems, Education and Nursing. Best of all, most of our students complete their degree in just two or three years.
<a href="#">Weather Status</a>	
<a href="#">Addressbookv</a>	
<a href="#">Google Pagerank Checker</a>	<b>E-Solution Provider</b> This Web application provider is developed for an organization, which deals with attending customer requirements. This site provides online solutions for their customer's. Once the customer is registered with the organization
<a href="#">PHP QUIZ</a>	
<a href="#">PHP Top Site List</a>	<b>e-Ticketing System</b> The Ultimate motto of the project addresses all the problems that were faced by the current traveling agencies. Coming to the feasibility aspect the current project focuses on
<a href="#">simple customizable news system</a>	<b>Geo Spacial Matching for Image Retrieval</b> Every day the average person with a computer faces a growing flow of multimedia information particularly via the Internet. But this ocean of information would be useless without the ability to manipulate, classify, archive and access them quickly and selectively. While text indexing is ubiquitous, it is often limited, tedious and subjective for describing image content.
<a href="#">Simple E-Classified Search Engine</a>	
<a href="#">Tag Board</a>	<b>Greedy Routing for Wireless Sensor Networks</b> The unreachability problem (i.e., the so-called void problem) that exists in the greedy routing algorithms has been studied for the wireless sensor networks. Some of the current research work cannot fully resolve the void problem, while there exist other schemes that can guarantee the delivery of packets with the excessive consumption of control overheads.
<a href="#">Uber forum</a>	
<a href="#">Your Banking System</a>	<b>HUMAN RESOURCE MANAGEMENT SYSTEM</b> To develop a software application that supports the application specific to the HR automation in an intranet specific to a company there by allowing the integration of all the employees pertaining to that organization. To keep track of all the other departments related to that organization such as marketing, development etc.
<a href="#">A simple image gallery</a>	
<a href="#">Anphin Image Gallery</a>	<b>Implementaion of Eccentric Network for Intranetp</b> Eccentric network is mainly used in software companies. Because many persons involve in completion of the project like team leader, project leader. Team members should finish their daily task and their source code should be stored in the main server. This is the day-to-day task done by the team members.
<a href="#">Contact Management</a>	
<a href="#">Download Time Calculator</a>	<b>Infrastructure Management System</b> This is to certify that the project work entitled "Infrastructure Management System for Vishakhapatnam Steel Plant" is submitted by xxxx student of B.Tech third year in order to fulfill the required curriculum of the mini project to be submitted in the college. It is a bonafied record of work carried out by her in the IT Department of VSP.
<a href="#">FAP -Free Webcam Portal</a>	
<a href="#">Franks Contact Script Advanced Beta</a>	<b>INTERCOM PROJECT</b> The Intercom project lets two people type across the intranet. You just start up the project, connect with the click of a button, and you've got your own connection: everything you type into the intercom, the other user can see; every thing he or she types, you can see. Presto – your own private intercom over the intranet.
<a href="#">Image Gallery</a>	
<a href="#">phphits</a>	<b>Intranet Mail System</b> The aim of the project was to develop an Intranet web based mail client system connecting to a Linux server running a mail server and with Apache as the web server. The aim was to implement the necessary functionality to the users such as receiving and organizing mails
<a href="#">Post A Link</a>	
<a href="#">Simple E-Classified Search Engine</a>	<b>KEYPASS PASSWORD PROTECTION MANAGER</b> In the present scenario every person is associated with some id and password. It may pertain to accessing the PC, the web, emails, financial institutions, access to credit cards, ATM's etc. Most often a person tries to remember them in order to use it. It is always known that a person or individual confuses between passwords of different id's. Some individuals in order to avoid confusion also adapt to use a common password for all id's.
<a href="#">WAP WAP portal</a>	
<a href="#">Course Registration</a>	<b>MINI PROJECT Report on E-COPS</b> This feature is made available to public for interaction with police indirectly.
